Andromeda – Quick start guide

Picture 1: initial installation files

1) Double klick on the setup file.
2) Switch to drive C and check if the “andro4” has been created.

Picture 2: program files in the correct folder path on drive C:

3) Open the folder and check if all folders and files are present.
4) If not, switch back to the installation files and copy all files and folders from folder “disk1” into the new folder “andro4” on drive C:
   - If the shortcut shows its icon like on picture 2, the folder path is correct. If it appears like a white sheet (e.g., the file “andpic.dir” from picture 2) then there is something wrong with the main folder / path.

Please note:

If the folder path is not correct the program won’t work correctly.

This can also appear by:

- the program can’t find the help file
- during the transmission of a new curve instead of the command prompt the following error message appears:
